Projects

Crypto-Betting-App **Full Stack Engineer, Team Lead**

Spring 2023, Capstone Project

- Developed, deployed, and maintain NodeJS server using ExpressJS to handle **Auth0 authentication** and routinely handle data calls to CoinGecko API endpoints, and CRUD functions for a document-based database. Used database to work around stringent rate limits resulting in reliable price quotes under five (5) minutes old.
- Managed Agile team's workspace and task board and hosted pair programming sessions in order to increase team efficiency and delivery times
- Cooperated with two (2) colleagues to design and implement Front-End architecture using **ReactJS**, **React Redux** and Highcharts (chart library) to provide a dynamic and reactive UI/UX to the user.

Visual Portfolio **Lead Software Engineer, QA Lead**

Fall 2022, Software Development II Course Project

- Lead team of three (3) front-end engineers in the design and implementation of UI/UX using framer-motion animation library over three (3) sprints to deliver a final product to client, achieving **final grade of 97/100**
- Organized two (2) user-testing events, client-acceptance testing and conducted end-to-end and integration testing.

Education

B.S. Information Technology

Georgia Gwinnett College

Summer 2023

GPA 3.3 | SAT: 1320

Relevant Coursework

Software Testing & QA

Systems Analysis & Design

Artificial Intelligence

Information Security

Languages

Proficient in

JavaScript, HTML, CSS, Java'

Some Experience with

TypeScript, Python

SQL, PHP, C#

Technologies

Front End Frameworks

React, Angular (light)

Bootstrap, TailwindCSS

Libraries

NodeJS, ExpressJS,

ReduxJS, AxiosJS

Other

No-SQL, SQL DBs

Soft Skills

Extroverted Charismatic

Patient, Punctual

Adaptable
